Instructions for poster design

Poster size: 80 cm (width), 100 cm (length)

The poster can be made in Slovenian or English.

We advise you not to include too much information on the poster and to highlight the most important information.

Suggested poster structure:

Title section:
- Title of the work (place it in the top margin, along the length of the poster)
- Information about the author(s) (title, name and surname, institution, address of institution, e-mail address)

Abstract:
- presentation of a referee-approved abstract with keywords

The main body of the poster:
- Introduction defining the purpose and objectives of the work
- Methods (what you did and what methods you used)
- Results (indication of the key results of the work)
- Discussion and conclusion (discussion of the results, what conclusions you have reached and why they are important, linking the results to known theory, etc.)

Record of literature and sources

We suggest that you use a sufficiently large and legible font when preparing your poster and avoid using different font styles. When presenting your work, use visual elements such as photographs, thought patterns, tables, and graphs. Photographs should be of good quality. You can use different colours (we suggest a maximum of three). Use simple sentences without jargon.
