

Revision questions

We have already gone over the historical development of vertical greening systems. We shall now improve our knowledge on its importance for urban areas.

1. How does green infrastructure impact on biodiversity in cities?
2. Could living walls contribute to environmental sustainability?
3. How, in your opinion, does green infrastructure affect the quality of life in cities?
4. Which plants have better particulate capture ability?
5. What are two other benefits of living walls?
6. Identify three economic benefits of green infrastructure.
7. Name five indoor plants that remove toxins from the air.
