

### *Revision questions*

1. Which statements below are correct:
  - a. Indoor light is sufficient for plant growing.
  - b. When choosing a location for an external wall we must take into consideration: air temperature, relative humidity, wind speed, precipitation, and solar radiation.
  - c. Living walls should be exposed to direct sunlight.
  - d. Plants that grow more slowly are more resilient and robust and therefore less susceptible to the wind.
  - e. Living walls have no visual impact on the overall appearance of the building.
  - f. Strong winds can permanently damage plants and can even tear them out of the wall.
